## **1. The Single Most Critical Factor in Making Money Online**

You may be wondering who am I and what qualify me to give you web hosting advice. Well, my name is Meir Liraz. You may have stumbled on my name on the internet, probably in relation to my activities as a writer and publisher of business guides. This is just one side of me, the visible one. There has been another side to my online presence, a concealed one, as a leading player in the internet marketing arena.

I've been an active internet marketer since the first days of the Internet, back then the reigning search engines were dinosaurs bearing names like Alta-Vista, Infoseek and Lycos, while Google was just a vague idea in the minds of two brilliant Stanford University students.

As I don't believe in theories and opinions, I've tested dozens of Internet marketing ideas, strategies and variables. Some proved to be successful while others bombed (and served me well as learning experiences). I must've been doing something right as I managed to accumulate along the way a seven figure fortune. The bottom line is that I've come up with a simple strategy that has enabled me to make money online like crazy.

As a bonus, I've included within this book a special section where I describe exactly the simple strategy that made me an Internet Millionaire. This is a step by step guide that will allow you to mimic my method and make a killing online.

Why reveal my methods now? Well, I'm semi retired now and I've made enough money so that my kids do not have to work one more day in their lives (if they so desire). I've had my blessings and now I want to help others succeed as well, this is my way to give back.

Now look, 99% of the folks who try to make it on the Internet follow the same rout, the same set of activities. They all move in one big herd. Listen, In the highly competitive online arena, when you do the same things as anyone else you don't stand a chance to succeed - you are doomed.

In order to win the Internet marketing battles you must go off the beaten path, you need to do something different, you need a competitive edge - and that is where the simple strategy presented in the bonus section come into play. It will give you that "unfair advantage" to boost your sales, pile up profits and leave your competitors in the dust.

When a soldier goes into battle he seeks to equip himself with the best weapons he could lay his hands on. The same goes for the internet marketing battles. The single most important factor in utilizing this strategy successfully is equipping yourself with the right tools and services. The magic word is 'Automation'. You need to have the best tools and you need to know how to put them to best use. This is critical, some of the tools that I'll show you can actually hurt you if not used correctly.

Look, in order to make money on the internet you need to get noticed by Google and you need to climb up the search engines' results pages (SERPs). Unfortunately Google gives preference to large and established sites. The little guy with a relatively new or small website does not stand a chance. You could of course go the "natural" rout. That will take you about 5 years to establish a site that will be liked by Google. I don't know about you, but I prefer to start making money with a new site much earlier than that. That is why you need to use some special tools, to take some unconventional measures - you need to be a little more creative. Sound complicated? don't worry, in the special bonus section, I'll give you exact instructions as of how to do it right.

Here's a list of the tools and services that I use while executing my strategy, later on I'll show you exactly how the strategy works and how these tools integrates perfectly within it to come up with the easiest, fastest, most effective way of making money online:

- 1. Keyword Research Tool:** [Keyword Canine](http://www.liraz.com/canine) - a multi-featured tool for niche discovery, keyword research and backlink analysis (for more details see here: <http://www.liraz.com/canine>)
- 2. Hosting Service:** [HostGator](http://www.liraz.com/hostgator) - a reliable web hosting. Has some extra features that makes it suitable for internet marketing activities. (for more details see here: <http://www.liraz.com/hostgator>)
- 3. Wordpress Theme:** [Thesis](http://www.liraz.com/thesis) - much more than a theme, it's more of a design and template manager for Wordpress. Most suitable for a business site that is meant to be ranked high on the search engines. (for more details see here: <http://www.liraz.com/thesis>)
- 4. Content Creator:** [Article Builder](http://www.liraz.com/articlebuilder) - produces high quality unique articles built around the topics and keywords that you give it. (for more details see here: <http://www.liraz.com/articlebuilder>)
- 5. Email Marketing Tool:** [Weber](http://www.liraz.com/aweber) - automatically manage all email marketing activities: creates sign-up forms, collects and manages subscribers, sends out scheduled emails and more. Powerful yet very easy to use. (for more details see here: <http://www.liraz.com/aweber>)
- 6. Article Spinner:** [The Best spinner](http://www.liraz.com/bestspinner) - a multi-featured tool for creating multiple versions of an article that will be seen as unique in the search engines. (for more details see here: <http://www.liraz.com/bestspinner>)
- 7. Links Building knowledge:** [Link Building Course](http://www.liraz.com/linkbuilding) - a comprehensive link building learning framework that is constantly updated to reflect the most recent effective link building strategies (for more details see here: <http://www.liraz.com/linkbuilding>)
- 8. Manual Link Building:** [Rank Crew](http://www.liraz.com/rankcrew) - an affordable and reliable manual link building service (for more details see here: <http://www.liraz.com/rankcrew>).
- 9. Automatic Directory Submission:** [DeepLinkerPro](http://www.liraz.com/deeplinker) - automate the creation of manual directory links, allows the use of varied anchor text and also to drip feed the submissions over time to make it all look as natural as possible (for more details see here: <http://www.liraz.com/deeplinker>)
- 10. Automatic Link Builder:** [Senuke](http://www.liraz.com/senuke) - a powerful backlinking tool which has been designed to assist with the time consuming task of creating a large number of links (for more details see here: <http://www.liraz.com/senuke>)
- 11. Backlinks Indexer and Booster:** [Backlink Booster](http://www.liraz.com/backlinkbooster) - automatically increases the power of the backlinks to a website. It's both a backlink indexer aiming to get the backlinks indexed faster, and also a backlink booster to help boost the amount of link juice each of the backlinks sends to a website (for more details see here: <http://www.liraz.com/backlinkbooster>)

Now, the next chapter features great web hosting tips and ideas. Starting in chapter 3 I reveal the simple strategy that made me an internet millionaire.

## 2. 101 Great Tips and Ideas Proven to Kick-Start Your Web Design

1. Make certain to read reviews to determine whether your potential web host has frequent periods of downtime. If your website is often inaccessible to visitors, there can be drastically negative consequences. For example, if you are running an online business, downtime directly translates into lost business because potential customers will not be able to access your website. Customers may also feel uncomfortable conducting transactions on your website because they might believe your website to be unreliable. Choose a web host that does not have a history of being offline frequently.
2. Always have a backup plan for web hosting providers. In the event that you experience significant and ongoing problems with your hosting service, you will want to have an alternate already researched. If you are without service for more than a day, start immediately putting your backup plan into action. This will save you the potential for even longer delays if your provider has serious problems.
3. It used to be more expensive, but in today's world, it is entirely possible to manage several domains without spending too much money. This helps your business grow, and it helps you reach targeted customers. Know what your options are as far as multiple domain hosting is concerned. This will give you a huge extra boost!
4. The web hosting service that you select must be one that will allow you the needed space to grow your site. While a simple HTML page is small, as soon as you begin adding pictures, video, or other media, the size can balloon quickly. For most websites, 100MB of space is adequate for the future growth of the site.
5. Find out what other programming services your potential web host offers. You don't want your sites to be limited to CSS and HTML. The best web hosts offer the ability to code sites using PHP and ASP as well. Even if you don't think you need these languages, you should use a web host that offers them. As your knowledge of web design grows, you might want to use these languages to help your site reach its full potential.
6. Security should be one of your big concerns. This can be achieved via the use of a good secure server certificate, such as SSL. A secure server is a sign of trust to a potential customer. You will want to use this option if you are asking your site visitors to provide you any sensitive information, like their address or financial details.
7. Take the time to research web hosts on the internet or on specific blogs. Then narrow down your first few choices. There are far too many web hosts, to do research on every one. But, by researching a short list of hosts you can avoid all the pitches and gimmicks that many of the hosts will try to sell you on.
8. Check to ensure the hosts that you're considering provides you money back guarantees. If you become unhappy with your provider, what are the consequences of canceling your service? This is a question you must be able to answer from your contract. You can have a reasonable expectation to be able to cancel within the first month of your contract. Some hosting providers make promises they cannot keep.

9. If you are using your website primarily as a blog, choose a web host that will allow you to sync with popular blogging tools like WordPress. These tools are usually free and simple to use, but you will likely want to host them with a professional service. Choose one that allows you import the files directly into their platform.

10. If getting more visitors to your website is important to you, choose a web host which incorporates SEO. If you choose this option you can be auto-registered on major search engines. This won't give you the detailed access registering your site manually will offer, though, and you may not like the results.

11. Choose a web host with a good support system. It is inevitable when working with websites that something will eventually go wrong. The difference is made when you have access to a reliable support team. An ideal support team can resolve most problems in 30 minutes, while some of the subpar companies will take up to 24 hours to even respond to a call for help.

12. Find out what happens to your content in case you wish to cancel your subscription. You should be given a few days to save everything if you wish to switch hosts and you should not be charged any cancellation fees. You should also beware of signing for a contract that specifies you cannot cancel your plan.

13. Be sure to pay for your host by the month. Avoid being sucked into a discount plan where you would have to pay for several months in advance. You never know what could happen with the host or what issues you may encounter. By paying on a monthly basis, you will be able to switch hosts quickly if needed.

14. Beware of web hosting services that charge very low fees, remembering that you get what you pay for. If you really only need a one-page site to direct customers to a brick-and-mortar business, then by all means go for a \$5 a month provider. However, if you plan to do any kind of online business transactions, or are reliant on high-end graphics and a lot of information, then pay for what you need.

15. When choosing a web hosting package, you need to make sure you get the right amount of disk space. When calculating the amount of disk space needed, you need to think of things like HTML files, graphics, scripts, and multi-media content. If your site uses up too much disk space, you will either be charged more money or the host can shut your site down.

16. Before choosing your web host, you should always try calling their technical support and ask a few questions. If you can talk to a representative right away, this means their customer service is efficient. If you cannot talk to anyone at anytime of the day or night, you should look for another service.

17. Don't choose your web hosting provider based solely on price. Although using a cheap or free web host may save you money in the short run, these hosts might not offer the disk space or bandwidth you need. Price should be only one factor in your final decision so that you ensure that you get what you most need.

18. The minute you start seeing things that you don't like with your web hosting company, you should begin looking at other options. This does not necessarily mean you are going to switch right then, but in case you need to, you will definitely be well-prepared and ready to move on.

19. If you own and operate several websites, it can be to your advantage to choose one web hosting service that allows you to have "add-on domains." Many hosts will give you the ability to have unlimited domains added to your main account at no additional fees. This can save you a lot of money, as well as time going back and forth between multiple accounts.

20. Free is good, but a free web hosting provider isn't always the best choice. Most free hosting services post banner ads on all the websites they host. You can't filter ads for objectionable content or even websites that compete with your business. If you use random ads, your websites reputation will suffer.

21. Beware of free hosting. Some websites advertise free hosting but charge you a ridiculous amount to register your domain or by charging you extra traffic. If you want a professional website, you should consider web hosting services as an investment that will allow you to create a much better website.

22. When on the prowl for a web host, aim to select one that always has news and other announcements. A host that always has news is one whose company is growing and whose services are striving to be improved. This also lets you better estimate where this company will be at in the future. A host whose company doesn't have many announcements is likely one that isn't evolving. Therefore, you should steer away from these.

23. If you want to establish a brand on the internet, think about getting a web hosting service with a POP3 email feature. This feature allows you to create your own email addresses containing the name of your domain. You will be able to give your customer an email address that reflect your professionalism and helps them remember the name of your brand.

24. Make sure that you choose a host that has support 24/7. You don't want to run across a problem or an issue and not be able to get a hold of somebody quickly. This could harm your business or personal endeavors. Once you've picked a host, try calling them at an odd hour to see if support service is available.

25. Find out what kind of other websites your service is hosting. If you notice that a lot of spammy or unreliable websites are hosted alongside with yours, most search engines will be more likely to rank your site lower because of this. Remember that your business will be associated with the host you choose.

26. When you are looking for a good web host, make sure that you check whether or not they offer a multiple home network. Also make sure that they are run by multiple bandwidth suppliers to ensure redundancy. Check and see if they offer a guarantee for network availability and up-time.

27. Pay attention to the SPAM policy. It is always best to avoid web hosts that "spam" their clients or that tolerates their clients doing this to their users. If there is not a specific document outlining their policy, check the FAQ. Be wary of any company without a well-defined spam policy.

28. Make sure you find a hosting site that is both reliable and stable. Meaning that they only take on the number of clients and sites that they can properly handle. They will also generally maintain dedicated servers and will do their best not to overload. A good hosting site will also take care in choosing which sites they will host and which ones they won't.

29. As your website gets more visitors, you may want to upgrade your service plan. Ask if there are any procedures they use to make sure that the upgrades happen in the timeline promised. If you need more bandwidth, they should be able to handle this request very quickly. This switch should be seamless, limiting problems and saving time.

30. Make sure the host you choose has minimal to no downtime. It is frustrating if you try to log on to your site, and the server is down. If you have a business that relies on the internet for sales, this means you will lose a lot of money because your site is not operable.

31. If you are going to have a website that mentions products and services that you offer, you need to have e-commerce hosting available in order for the customers to make purchases. You do not want to push your customers, but at every opportunity, they need to have the ability to make a purchase at their disposal.

32. It is important to understand the refund policy of your potential web host prior to making a commitment. A lot of web hosting packages will require you to sign up for a year at a time, or will offer significant discounts for making a long term commitment. You should make certain that you will be able to obtain a refund if the service is less than satisfactory. Certain packages may not allow refunds, or might have cancellation fees.

33. Call the customer service number and ask about SSL certification and shopping carts. If the technicians are helpful, you have found a web host that understands e-commerce and will be able to meet your needs. On the other hand, if no one is able to answer your technical questions, look for a different host.

34. Are you considering utilizing a web host that is free for the website you are starting? If so, then check into the service that the free web host provides and be sure that you back up all of your data. This is important because free web hosts typically don't back up your data. The end result is you being out of luck should something disappear.

35. It is important to determine your needs prior to shopping for a web hosting service. There are numerous packages you can choose from that vary significantly in price. Some of the factors you should consider include the amount of bandwidth you need, how much disk space you require, and the types of databases offered. Knowing your requirements in a web host will make it much easier for you to select a hosting package.

36. Make sure that you factor in the price of a host when selecting one. If you've ever heard that something is just too good to be true, then it likely is. This definitely applies to web hosting. You shouldn't purchase a web-hosting plan that is really cheap. When a plan is extremely low in cost, then it likely won't provide high-quality hosting. Therefore, purchase a service that provides a reasonable price for the quality that you expect.

37. Check to see if your web hosting service gives you an easy method to submit your pages to search engines. You will also want to know how much control you have over search engine optimization and keywords, as well as how often you can send updates for no charge.

38. You should look for a web host that offers a good FTP application. An FTP software allows you to upload new content to your site quickly and safely. If you have to go to your host's site and log in to upload new content, you are losing a lot of time.

39. If you're going to use a web hosting company, make sure it's not in danger of going out of business. Find out how long the company has been in business, and whether they have been profitable. If the company goes out of business, you could also lose access to all of the data that was stored on their servers in addition to having your website go offline.

40. In your quest for a hosting company, make sure that you do research outside of the host's website in order to better determine if it's a good web host. Find comparison websites and check out reviews to get a clear picture of the host's quality of service. This will give you a better picture of the actual quality of service and features, and who has had issues with any of them.

41. When trying to find a web host, make sure that you check out the testimonials. These provide you with an excellent idea of how every company deals with certain situations. You get to witness what other people think of their services. However, be careful, because some hosts fake testimonials on their sites. Testimonials that do not provide a link to the customer's own website are very likely to be faked. A host with many legitimate positive testimonials should be considered.

42. Before signing up with a web hosting service, be sure that you understand all the costs that will be incurred initially. In addition to the monthly charges, which may seem reasonable, check for setup fees, domain registrations, and how much you may pay for a secure site. In addition, ask about their fees for private domain registration.

43. If your website is heavy on graphics, such as photography or art, then look at the image size of files that can be uploaded. This is very important, and you do not want to be surprised to learn that the plan you choose limits sizes or number of images allowed.

44. Determine how many databases you currently require, and expect to require in the future. Keep in mind that you will need additional databases for each new domain that you add to your web hosting package. You might need to invest in another hosting package if you run out of databases, even if you have room to add more domains. Find out if it is possible to expand the package you are considering, and add additional databases if the need arises.

45. Your domain should be registered outside of the web host. This way you can keep the name in case of a disagreement between your host and you, or a shutdown. Your hosting provider will control the registration of your domain instead of you.

46. Think about security considerations when picking a web host. Websites are under attack regularly, and there are very many other threats, as well. Your web host should have precautions in place for events like DDoS attacks and other threats. Establish the possible risks and outcomes that might be faced if a host is attacked.

47. You must be familiar with band-width, or the amount of data that is able to transfer in and out of your web hosting account. Different web hosting companies offer different prices on different band-widths, so you need to make sure you use this to help you make a decision as to who you should select for web hosting.

48. Redundancy, redundancy, redundancy. This is a factor you should consider in a quality web host. With your valuable information and business demanding consistent uptime and stability, it is crucial that your host has some level of redundancy in place, such as power, data and even environmental protections. You need to have a good idea of how your investment is being protected.

49. Look for different reviews on a web hosting service. If you know any webmasters personally, ask them which service they use and how much they pay. Compare different sources and look for reviews written by people who have a site similar to the kind of project you are working on.

50. Search for web hosts that give you a cPanel. A cPanel assists you in adding popular applications onto your site with just a couple mouse clicks. CPANEL is intuitive for a novice website owner and simplifies the process significantly. In addition, it will help you manage your website more efficiently.

51. If you are new to web hosting, you should get open an account with a free service and create a small website. This will allow you to practice and understand how uploading content is done. Once you feel more comfortable, it is time to invest in a better service and upload your real website.

52. Though you may not want to think about any potential need to shut down your website in the future, don't neglect to ask about cancellation policies with a web hosting service. Inquire about contracts, refunds, and what happens to your content if you cancel your service. Ideally, there would be some way to retain the pages that you worked so hard to create.

53. When subscribing to a web hosting service, find out how long it will take for your site to be online or for your domain name to be registered. If the host you chose is unable to guarantee you that your site will be online within a few days, you should look for another solution.

54. Be aware of the many scams and hidden fees. Many hosts go out of their way to advertise low fees, but they fail to point out there may be hidden, or extra fees, as well. The way to avoid this is to know upfront what you need from a web hosting provider,

and make sure the plan you choose has those features and no hidden costs associated with them. Find a plan that includes the features you need but does not break your bank.

55. If you wish to add videos to your site, look for a host that supports Flash FLV format. This format is currently the most efficient way to host videos online and guarantee a fast streaming time for your visitors. Make sure you are allowed enough storing space and bandwidth for videos.

56. Find out whether the hardware utilized by the web host you are considering is reliable. Their hardware will have a direct effect on the performance of your website. This is particularly important if you are using complex scripts to generate your webpages, or if you are conducting a large number of concurrent transactions on your website. Make certain that their hardware is acquired from reputable vendors and is up-to-date.

57. You should know that there are more than two hundred different extensions for domain names. Choose one that is recognizable and that describes the type of content of your website. Perhaps you could include the extension into the name of your site to help people remember it. Do more research on different extensions to choose the right one.

58. When choosing a web hosting package, you need to make sure you get the right amount of disk space. When calculating the amount of disk space needed, you need to think of things like HTML files, graphics, scripts, and multi-media content. If your site uses up too much disk space, you will either be charged more money or the host can shut your site down.

59. When choosing a web hosting service, always check their record for down time. If you are conducting business through your website, you will almost certainly lose customers if they cannot access your website at all times, day or night. Check not only how many times they have outages weekly, but what the duration of these outages are.

60. Choosing a web host for your site can be a difficult process. If you can afford even one of the more reasonable ones, you're more likely to succeed with it. However, just because you can pay doesn't mean you have to pay through the nose. Some of the expensive services are actually, less reliable than the more affordable ones.

61. When selecting a web host, consider how much the host costs. Some hosts charge on a per-year basis while some may be month-to-month. Look for a host that costs an average of about \$5 per month as this will most likely give you a great value for your money as opposed to a free hosting site that may not offer as many options.

62. Web hosting is a very volatile and risky business. Therefore, the web hosting companies can experience many ups and downs, and many companies do not make it. Therefore, it is important not only to do your research, but make sure you understand the conditions behind the environment. Choose your web hosting company wisely.

If you read or find out that a service has a low up-time, this could be a sign that they are filling their servers with too many websites and cause them to crash often. This means your site will be down regularly and loading your pages will take a lot of time.

63. Make sure to do very thorough research when looking to purchase hosting services. You do not want to rely on only one or two recommendations when it comes to this. By doing thorough research on the intended host, you will be able to read about both the good and bad experiences. Choose the one that has the fewest of the bad ones.

64. If you plan to change your web host, make sure that your new host offers at least the same features and service as your current host. Changing web hosts is not difficult, but it does require some preparation and work. So if you make the change, be sure that you are changing to a better plan to make it worth your while.

65. Good communication is key when picking out a web host. Your goal should be to obtain a host whom interacts often and is concerned with assisting their customer in meeting certain needs. You want to be in contact with your host when necessary in the event that problems take place.

66. Be aware that if you use site templates to create your website, the monthly web hosting fees will almost always be higher. This is because you will be constantly accessing their online tools to update your site, thus creating more use on their system. Though it can be easy for a beginner to build a site this way, consider the cost effectiveness of hiring a professional designer upfront, and saving much more than that on monthly fees.

67. Once your site is online, you will have to associate it with your domain name. Look for DNS settings, which should be available on your web hosting account. Copy and paste these settings when you register your domain name so it redirects to your content. If you switch to another host, you will have to update your DNS settings.

68. When putting your website online, you will have to choose a domain name. Too many webmasters choose a good name but do not pay enough attention to the extension of their websites. A lot of internet users tend to take websites ending in '.com' or '.net' more seriously than other extensions.

69. If you are going to obtain a shared web hosting solution, conduct some research on the websites that you will be sharing your server with. You should definitely avoid sharing servers with websites that participate in spam due to the fact that if any of these websites receive an IP address ban from search engines or internet service providers, your website will be banned along with them. Adult websites in particular tend to participate in these kinds of activities.

70. When comparing web-hosting services, you should choose the ones that inspire you the most confidence and stands apart from the competition. Choose a plan that includes all the features you are planning on using and allows for your site to grow. The price should also correspond to your budget.

71. Look for a web host that lets you install databases easily, for instance, with the Instant Install feature. This means you will be able to add a photo gallery, a forum or a message board. Find out what kind of databases your host can support to make sure you will be capable of developing your site properly.

72. Remember that web hosting is a commitment. In some cases, you will enter into a contract and not be able to cancel your plan for at least a year. If you consider your options carefully and make educated decisions, you will be able to operate a successful website on a host you can trust.

73. One effective way to determine the reliability of a web host that you are considering is to access the websites of their customers at various times throughout the day for several days. You should check for any errors that could be the fault of the web host, and find out whether the load times are fast enough. If you are running an online business, this is very important since slow load times can cost you customers!

74. Know the speed and reliability of the internet connection that the web host uses. The web host you choose should have at least a T3 line as their connection to the internet. Some of the premium hosts also provide redundant connections, ensuring that even if one of their internet connections experiences an outage, service is not interrupted but be prepared to pay more for this type of speed and reliability.

75. If you are hosting your site with a Linux based site, be sure the company you choose updates their information regularly, and at all levels. You don't want your page to crash or be insecure because your host is not properly maintaining their servers and networks, so look for those that do.

76. The web hosting service that you decide to utilize should have easily accessible customer support with fast response times. This is important because once you begin running your website, you might realize that you require more than is offered in your package. For example, if your website has a huge boost in traffic that is beyond your bandwidth limits, you should be able to contact your web host and immediately obtain more bandwidth. If it takes over a week for the web host to respond to your request, and if your website goes offline in the meantime, this could have lasting negative consequences.

77. If you're going to use a free web host, make sure that you know all of the restrictions about site content, as different hosts have different rules about what you can post, especially in the areas of music or video, as streaming those can take up bandwidth. If you know the rules, you won't be in for any surprises.

78. The best web hosts offer you many different tools to help you improve your website. Some services allow you to build your site from scratch on an easy to use click and drag software or to use one of their templates, for instance. Look for a service that comes with the kind of tools you need.

79. Consider how much downtime the web host will have when looking for one. These downtimes vary from 10% to .000001%. This means that there could be hours of

downtime per week or as little as seconds. Select a host with the lowest amount of downtime that you can find.

80. A free hosting provider will only be valuable to you if it can meet all of your needs. Most free hosting services post banner ads on all the websites they host. What's more is that you will not control the ad content placed on your site. The random adds that are on your site, will make it appear very unprofessional.

81. Always get a pricing breakdown for you hosting package. You will need to include hosting fees as part of your website's budget. By knowing exactly what your monthly fees are covering, it will allow you to budget any factors that may be relevant, such as time, bandwidth and data. Inspect the terms closely for any fees that may be incurred and should be budgeted as a precaution.

82. In some cases, advertising an uptime of 99.9% does not truly reflect the kind of performance to expect from a web hosting service. Uptime reports cover a whole month and represent the amount of time for which the site was available. It does not take into consideration traffic peaks: your site might be offline during the busiest hours of the day will not be reflected by a good uptime.

83. Make sure to do very thorough research when looking to purchase hosting services. You do not want to rely on only one or two recommendations when it comes to this. By doing thorough research on the intended host, you will be able to read about both the good and bad experiences. Choose the one that has the fewest of the bad ones.

84. Be aware that many web hosting providers are actually reservers. They do not actually own their own their web servers, so beware. You may experience delayed times for fixing problems or customer service requests. You can often get the exact same service directly from the company that they are leasing space from, so ask who that company is.

85. Though it sounds technical, you need to find out whether the web hosting service you are considering has "blackholed IPs." If a provider has blackholed portions, that could mean that they do not regulate what kind of businesses are on their server, including porn sites and spammers. If your host has been blackholed, you may have trouble with other networks refusing email from or to your site.

86. Switch web hosts if an outage lasts for more than a day. Even if the host explains why the server is down, the most likely reason is that the host did not invest enough into back up plans as far as outages are concerned. Any truly professional web hosts will have ensured that outages will be short and infrequent.

87. After you have your site up and going, it is important that you gather statistics about your site. These statistics tell you many things including how many customers and their actions. Find a great web hosting service that provides these types of statistics for you to make business decisions about.

88. Find out if your host backs up your data for you or if you're required to do it yourself. This is an extremely important function of website ownership, not only because you

must comply, but mainly for keeping your data safe and secure. This way, if something ever happens, all of your site's information is still available to you.

89. Prior to signing up with a web hosting service, ask about their firewalls. You will want to choose one who has a dual firewall in place. Not only will this protect your information during power failure or other malfunctions, but it will also be an added barrier against theft of your personal information.

90. Stay away from a web host who has an issue with automating or properly administrating the most basic and necessary aspect of business. If you see they have issues with their billing and payments, then try to stay away from them since this usually means that they will have many other issues including having frequent site outages.

91. Avoid paying for web hosting space that you actually do not need. Some plans will entice you into contracts that cost more by affording you unlimited space - but do you actually need this? Remember that you can always upgrade later as your needs increase. Unless you are a large company or are engaging in eCommerce, you can probably get by with 10MB or less.

92. Think about your long-term budget before you commit to a web hosting company. Some companies offer discounts if you commit to a 1-year, 2-year or longer contract. Choose a company that offers a low fee for long-term hosting, but make sure the company you choose offers all the options you need.

93. When you are considering a particular web hosting business, ascertain how long they have been around. A good company which has operated longer often provides better support. When an issue happens, the company should have the experience needed to deal with it. The simplest problems will be dealt with immediately, possibly even without your knowledge. If you choose a newer host, you might have to deal with inexperienced technicians and a lot of downtime.

94. Be sure to check the amount of space you will be given from your host. Some web hosts only offer 1GB of free space, while others offer much more. Especially for free sites, the more space you use, the more limited your account will become until you start paying for it.

95. You want to ensure that you get web hosting that has a good server. You don't want to have a lot of people coming to your site and start lagging because of all the traffic that you've been attracting to your site recently. So be sure to invest in a server that is reliable to avoid clutter problems in the future.

96. Take email needs into account when choosing a web hosting plan. Most plans will include some basic email services, but if you need additional mailboxes or storage, you may have to purchase an extra package or select another tier of service. Some inexpensive plans may also limit the number of emails you can send in a day.

97. Don't purchase a web hosting plan just because it offers unlimited disk space or bandwidth. Compare these plans with plans that offer a reasonable amount of space and bandwidth to determine which is the best plan for your needs. Sometimes plans

that offer a finite amount of space or bandwidth are better for your particular needs than plans that offer unlimited quantities of space or bandwidth.

98. Ask any host you are researching how many email addresses you can have with the plan you were considering. Pick one that uses POP 3. This type of email address is linked to your domain name, and you can access the account from anywhere you need to.

99. If you are using a dial-up connection, you will need to get a web host. To ensure that your website is always online and updated, it must be backed by a fast and always reliable connection. If your connection lags or goes down, so will your site.

100. If you can, choose a web hosting services with a message board. This will allow you to talk with other webmasters and share tips, as well as, complain about any issue you encounter. If your host allows clients to talk on a forum, this means they have nothing to hide.

101. As you make your hosting decision, keep a second choice in mind. This makes it so you can quickly switch hosting providers without a lot of downtime if the problems persist or become too much of a burden.

## **Special Bonus: The Simple Strategy That Made Me an Internet Millionaire**

### **3. The First Step: Discovering Profit-Driving Keywords**

There is a special breed of Online-Millionaires that are making money on the internet like crazy. You've probably never heard of them. They keep themselves and their activities under the radar. Why? because they follow a certain simple strategy and they don't want you or anyone else to discover it. This strategy has created more millionaires than you could ever think possible.

How do I know? I am one of those Millionaires, and I'm going to reveal to you now each and every component of this incredible strategy.

My name is Meir Liraz. You may have stumbled on my name on the internet, probably in relation to my capacity as a writer and publisher of business guides. This is just one side of me, the visible one. There has been another side to my online presence, a concealed one. And there is where I've been taking advantage of that simple strategy to accumulate my seven figure fortune.

So why reveal my methods now? Well, I'm semi retired and I've made enough money so that my kids do not need to work one more day in their lives (if they so desire). I've had my blessings and now I want to help others succeed as well, this is my way to give back.

Now look, 99% of the folks who try to make it on the Internet follow the same rout, the same set of activities. They all move in one big herd. Listen, In the highly competitive online arena, when you do the same things as anyone else you don't stand a chance to succeed - you are doomed.

In order to win the internet battles you must go off the beaten path, you need to do something different, you need a competitive edge - and that is where my simple strategy comes into play. It gives you that "unfair advantage" to boost your sales, pile up profits and leave your competitors in the dust.

When a soldier goes into battle he seeks to equip himself with the best weapons he could lay his hands on. The same goes for the internet battles. The single most important factor in utilizing my strategy successfully is equipping yourself with the right tools and services. The magic word is 'Automation'. You need to have the best tools and you need to know how to put them to best use. This is critical, some of the tools that I'll show you can actually hurt you if not used correctly.

Look, in order to make money on the internet you need to get noticed by the search engines and you need to climb up the search engines result pages (SERPs). Unfortunately Google and the other search engines give preference to large and established sites. The little guy with a relatively new or small website does not stand a chance. You could of course go the "natural" rout. That will take you about 5 years to establish a site that will be liked by Google. I don't know about you, but I prefer to start

making money with a new site much earlier than that. That is why you need to use some special tools, to take some unconventional measures - you need to be a little more creative.

As a matter of fact, one of the best kept secrets of the cyber-millionaires is what tools they use and, more importantly, how they make use of them for maximum benefit.

Now I'm going to show you exactly how this simple strategy works and how the tools integrate perfectly within it to come up with the easiest, fastest, most effective way of making money online.

The way my strategy works is simple. You focus on creating quick little sites that each target a laser targeted long-tail keywords. Once you complete one site you quickly move onto the next. So you don't want to spend too much time on any one site. This way you create, one by one, an army of passive income websites that keep producing cash for years.

I'll show you exactly how to create and promote your first money making website, than you just rinse and repeat to create as many websites as you wish, the more sites you create the more money you make. The only limit is how far you want to go.

Now let's not waste any more time and move directly to the first component of the strategy which deals with deciding on the keywords your site is going to target. This is a crucial decision and a fundamental part of achieving success online. You could do everything else perfectly, but target the wrong keywords and your site will be a total failure. in this chapter I'll tell you exactly what to look for when searching for good solid keywords.

Most Internet Marketing "experts" and the self-proclaimed gurus will tell you to use the Google Keyword Tool (now called: "Keyword Planner" and is only available to Adwords account users) for your keyword research. This is a big mistake! if you only use the Google tool you'll end up going in circles with the rest of the herd achieving no success. Why? although the Google tool will provide you with a nice list of several hundred keyword variations, it will tell you nothing as to the competitiveness of the terms. You have no clue as to how hard it will be to rank in the search engines for any specific term. This is critical. Most newbies will choose a term from the Google Tool that is too competitive and end up hitting a brick wall. You certainly don't want to be spending any time or money building a site that will never rank in the SE's.

In order to implement the strategy successfully you need to utilize for your keyword research a tool named [Keyword Canine](http://www.liraz.com/canine) (If the link doesn't work, copy and paste the following URL into a browser: **www.liraz.com/canine**).

Keyword Canine (KC) will also provide you with a nice list of several hundred keyword variations but it goes beyond the Google Tool in that it will also analyze the competitiveness of each keyword variation. This is crucial and that is where you gain your "unfair advantage" over the 99% that only use the Google Tool.

How does KC do it? it has a special algorithm in its backend that looks at the top 10 Google search results for your chosen keyword and produces an accurate analysis in the form of "Very Easy, Easy, Moderate, Hard or Fierce" so you can literally plug in your keyword and get an instant answer.

Keyword Canine has a ton of additional features that can help you as an Internet marketer but for the purpose the implementation of my strategy, the competition analysis is what we need.

I'm not going to walk you here thru the steps of conducting a keyword research with Keyword Canine as they have pretty good tutorials explaining everything. Simply sign for the service and follow their instructions.

Now let's see what properties a keyword must have in order to make us the most money.

For starter it has to be of a commercial value. This relates to our business model, the way we monetize our site. I will elaborate on this in a later chapter but for now I can tell you that our income will come from two sources:

- a. Google AdSense ads.
- b. Affiliate Programs

To maximize our income from those two we need to look for keywords in markets that has AdSense advertisers and affiliate programs that are willing to pay us top dollars. in the appendix you can find a list of the 50 best paying affiliate marketing niches. These are the markets that has a high concentration of AdSense advertisers and affiliate programs that are willing to pay top Dollars for your referrals. If you plan to tap any of these niches you must take into consideration that these are also the most competitive ones. However, I think it is still possible to find gem keywords in these areas provided you do your keyword research right. Alternatively you can look at other, less competitive, niches and still make good money as long as you take into consideration their commercial value.

Another property that you want to consider when looking for good keywords is the search volume. Obviously, even a #1 ranking isn't going to do you any good at all if nobody searches for the keyword that you rank for. I would say that the minimum search volume you should look for is 500 monthly searches (Keyword Canine shows you the search volume right next to the keywords in the list). Some will say that this is too low to target, however I had many successes with pages targeting close to this number of monthly searches.

The next property you need to consider for a good keyword is how competitive it is, how hard it will be to have it ranked in the first page of Google's search results. This is critical, however if you use Keyword Canine it will do the competition analysis for you and come with a recommendation in the form of "Very Easy, Easy, Moderate, Hard or Fierce". I would not go beyond "easy" with a new site.

So to summarize, in order to find a good keyword you need to consider:

- \* Commercial value
- \* Search volume
- \* competition strength

How many keywords should you target in one site? Some will tell you that you need to look for several terms and optimize each page in the site for a different term. This is not how my strategy works. For the small niche sites that we create it is best to dedicate each site to only one keyword and direct all our Search Engine Optimization (SEO) efforts towards the main page that is optimized for that keyword. We don't want to dilute our efforts by targeting several keywords in a site. With this concept in mind we don't want to waste our time looking for other keywords that will not rank anyway. Your time is better spent working on your linking structure (discussed later) or researching new keywords for new sites.

[Go to Top](#)

## 4. The Second Step: Monetizing Your Site

The Simple Strategy's business model is based on 2 sources of income:

- a. Google AdSense ads.
- b. Affiliate Programs

Which is better? there is no clear answer to this question. Some niches will produce better with affiliate programs while others with AdSense, you should test on a niche by niche bases. Usually you'll make more money with an affiliate site, unfortunately there may be many instances where you will find a good niche with keywords that can be easily ranked but no suitable affiliate program, in this case you'll use AdSense ads, and by the way, this will happen to you a lot.

Once you find a good keyword to target you start looking for an affiliate program that will go with this site. As a rule of thumb you should always prefer to promote digital products (eBooks, software, online services, etc.) over physical products. Why? because digital products come with higher margins which in most cases translate into higher commissions to the site owner.

Where can you find good affiliate programs to promote?

Your first bet should be the [Clickbank Marketplace](https://accounts.clickbank.com/marketplace.htm) (<https://accounts.clickbank.com/marketplace.htm>)

Clickbank offers thousands of products, look for products that are 100% relevant to your niche and has a credible sales page.

If you can't find a suitable product at Clickbank try one of the following affiliate program directories:

[Commission Junction](http://www.cj.com) (<http://www.cj.com>)

[Affiliatetips.com](http://www.affiliatetips.com) (<http://www.affiliatetips.com>)

[AssociatePrograms.com](http://www.associateprograms.com/directory/) (<http://www.associateprograms.com/directory/>)

[Affiliatesdirectory.com](http://affiliatesdirectory.com/directory) (<http://affiliatesdirectory.com/directory>)

If you still can't find a suitable affiliate program try a Google search that combines your keyword with the word "affiliates" and other similar variations. Sometimes this works and you will find one or more good affiliate offers for your niche.

If all of the above does not work and you can't find an affiliate program that is relevant to your target niche, monetize your site with AdSense ads. This is not necessarily a bad thing. I had AdSense ads that produced \$5, \$6 and even \$9 per click.

Anyway, don't ever be tempted to post affiliate links that are not fully relevant to your target keywords! this will never produce satisfactory results.

Where should you place your affiliate links and AdSense ads on the page? The best spot would be right below the top article title and above the article body, if you are using Wordpress it would be directly below the post title and above the post content. This would be the spot that will by far produce the best results.

As for the AdSense ads, I always match the background and border of the ad with the background of the theme where the ad will be placed and I recommend you do the same - my tests show that this increases the effectiveness of the ads. You can use a plug-in for Firefox and Chrome called [Colorzilla](http://www.colorzilla.com/) (http://www.colorzilla.com/) to help you do this quickly.

Another good option for the affiliate links is to embed them within the text, preferably towards the top part of the article.

As for affiliate links, my tests show that reviews and text ads will, in most cases, outperform banners. I guess some folks simply ignore banners altogether. I seldom use banners to promote affiliate offers, I've always found effective ways to present affiliate offers with text only. I will be the first to admit that my pages are not very pretty, but hey, I'm not in the business of creating cute pages, I am in the business of making money, and for this my "not pretty" pages are doing very well.

Below is an example of affiliate links embedded within an article:

The image shows a screenshot of a webpage article. At the top, there is a blue header bar with the text "Free Car Insurance Deals". Below the header, the article text begins with a red sub-header: "Here's How to Get Free Car Insurance Deals". The main text discusses finding the best auto insurance deals and mentions two services: "InsurMe" and "Kanetix". The "InsurMe" link is underlined and blue, and the "Kanetix" link is also underlined and blue. The text is set against a light gray background with a white border.

Here's is an example of affiliate links in a review format placed under the title of an article. By the way, I've used this format, "The 5 Best ...", multiple times with various niches. Over the years this format proved to be very profitable for me.

## Car Insurance Information Center

### 7 Day Car Insurance, Compare to Get Low Cost Rate

#### The 5 Best Car Insurance Quotes Providers

We've reviewed dozens of auto insurance companies, brokers and agents to bring you this elite list of brands with the best free quotes online and very cheap rates. We recommend you get a quote from each company so that you will be able to compare and get the best rate. This comparison will allow you to save as much as \$500 and more on your vehicle insurance.

- |   |   |
|---|---|
| 1 | <a href="#">Car Insurance Finders</a> - May save you hundreds on your car insurance. Simply enter in your zip code and get free quotes from providers in your local area that offer the best rates. |
| 2 | <a href="#">USInsurance</a> - Simply fill out the quick form and this system will match you up with the cheapest offers in real-time. You get low cost custom tailored quotes within minutes.       |
| 3 | <a href="#">InsureMe</a> - Provides multiple company insurance rates, see how companies compete for your business. Offers great rates from quality insurers.  |
| 4 | <a href="#">2Insure4Less</a> - Provides comparison quotes which can be purchased immediately, offers great rates.   |
| 5 | <a href="#">Kanetix</a> - Offers one of the easiest to use, and most 'consumer-friendly' instant insurance comparison service available.  |

For many people, it is not easy to get a large amount to cover something such as insurance coverage. It could be a significant wide range of dollars to cover at one time, therefore, the choice of no deposit car insurance is often rather appealing.

No deposit car insurance implies that you get instant auto insurance protection straight away, when the insurance policy is put over your car, so you do not need to pay anything in advance. You are able to pay the insurance policy on a monthly base in payments; nevertheless, you may have to offer a credit card for guarantee that you submit several

### Build an Email List

The biggest sin committed by internet marketers is not building an email list made of emails collected from visitors and customers. In order to maximize the profit potential of your site you need to create an email list. Fortunately, all the aspects of building and maintaining a list can be, and should be, automated. Selling to your list is the easiest money you're going to make.

Now I'm not going to teach you basic Email marketing here, you'll find plenty of resources online. However, here are 4 important points that you should consider:

1. Build an opt-in form and integrate it into your home page. Place it "above the fold," so visitors can see it immediately and don't have to scroll down.
2. Offer a lead magnet, something that has value that you offer in exchange for the visitor's email address. This could be a free eBook, a special report, a webinar, a list of tips, Etc. You have to tailor the offer to fit your niche so that you keep your list targeted, this is important.

3. Use [Weber](#) (If the link doesn't work, copy and paste the following URL into a browser: **www.liraz.com/aweber**) to manage your list building and marketing activities. Aweber is the industry standard. It's extremely powerful yet very easy to use, most of the successful internet marketers use it. Working with Aweber is a breath, it will automate all your email marketing activities: creating your sign-up forms, collecting and managing subscribers, sending out scheduled emails and more.

4. Email marketing is about creating a relation with your visitors and customers, it's about trust. Do not abuse it by spamming your list with frequent blatant sales offers. Send them at list 3 useful, content filled, emails for each email that contains a sales offer.

[Go to Top](#)

## 5. The Third Step: Creating a Site That Will Attract Tremendous Amounts of Traffic

Once you have chosen your keywords you are ready to build your site. For your domain name you should strive for an exact match domain (EMD) if available. So if your keyword is 'women car insurance' you'll go for [www.womencarinsurance.com](http://www.womencarinsurance.com). if this is not available try the .net, .info or any other TLD that happens to be available.

EMD domains used to get you a big advantage with Google - but not anymore. Unfortunately Google has changed their algo regarding EMDs but it can still get you some extra points, and of course anything that Google gives we are willing to take.

As for the hosting service I highly recommend you use [HostGator](http://HostGator) (If the link doesn't work, copy and paste the following URL into a browser: [www.liraz.com/hostgator](http://www.liraz.com/hostgator)), They are reliable, responsible and very suitable for internet marketing activities.

The cheapest and fastest way to build an effective niche site is to use Wordpress. and by the way, HostGator is probably the easiest web hosting platform to install Wordpress on. Using a few clicks of the mouse, your HostGator-hosted Wordpress site will be up and ready in less than five minutes. look for instructions at their site.

Once Wordpress is installed on your server there are some modifications that you need to make to the site.

First you need to set Wordpress to present SEO Friendly Permalinks. Although we don't concentrate on the internal pages of our site, they often can rank in the SE's. So it is very important to set a good URL structure. Once logged into Wordpress, Click "Settings" then "Permalinks" and change it from default to "Post Name." This will change the structure of the URL's from default (site.com/?p=114 for example) to a good, SEO friendly version (site.com/title-of-post-goes-here).

Now replace the default theme with another one, simply find a new theme that is simple and "clean" - use the automated theme installation process from within Wordpress.

"Appearance" then "Themes" (while logged into Wordpress) then click the "Install Themes" tab. Leave all of the fields empty (they are by default) and then click the "Find Themes" button.

Next, Clean the theme from unnecessary elements - by default, most themes have the sidebar loaded up with useless things like META links, a calendar, archives etc. The footer also typically contains one or more links that can be removed and there are a few other useless things included by default as well. So the next step is to clean all of that up! We don't want excessive external links draining the authority we generate, which could be going back into our internal pages. And we want everything focused on the content and the ads.

Now you need to set the homepage to show only one article - it needs to look more like a static site and less like a blog. Primarily because it reduces canonical URL's and

duplicate content. To do this, you're going to publish the homepage article as a page rather than as a post!

Once you've done that, click "Settings" then "Reading" and select the "A static page" radio button and then next to "Front page" select the page that is optimize for your keyword and then click "Save Changes." Now view your site in a browser and you should see that article, and that article only, on the homepage.

Now Clean up the footer and the sidebar and remove any unneeded links like the link to the theme creator's website, the link to Wordpress, Etc.

What theme should you choose for your Wordpress site?

While there are many free Wordpress themes out there, I recommend you use a theme called [Thesis](http://www.liraz.com/thesis) (If the link doesn't work, copy and paste the following URL into a browser: <http://www.liraz.com/thesis>). This is much more than a theme, it's more of a design and template manager for Wordpress and it's the best theme for a business site that is meant to be ranked high on the search engines.

### **Now what about content?**

You need to start with at list 6 article pages for a new site. Each article should be 500 to 1000 words long.

The best source for site content is a service called [Article Builder](http://www.liraz.com/articlebuilder) (If the link doesn't work, copy and paste the following URL into a browser: [www.liraz.com/articlebuilder](http://www.liraz.com/articlebuilder)).

Article Builder produces high quality unique articles built around the topics and keywords that you give it. Each article is built by weaving together snippets to build an article based on your category and subtopic choices. They have tens of thousands of categorized snippets in the database, every time you generate an article, it's different!

If article builder does not have articles in your topic you'll have to contract someone to write the articles for you, this is not expensive. Simply run a Google search for "article writing" or "articles writers" and you'll get plenty of offers.

In addition to being a good source of content Article Builder has another extremely useful feature. It can post content automatically to your Wordpress site on the schedule you choose. Why this is important? because Google likes sites that are being updated with new material on a regular basis. It is recommended that you set Article Builder to post a new article to your site once a week or about 3 articles monthly, this way you'll gain some extra points with Google.

Now here is a trick to creating articles fast and cheap. This is not very ethical and I am a bit shame telling you I did it, but anyway since I pledged to tell you all my tricks (or at least most of them ;-), I fill obliged to tell you about this one too, just that you'll know that this is available.

Here's how it works, you run a Google search with your topic as the search term, you add the word 'tips' or 'Guide' to the search. Now you collect several snippets from

different good on topic articles that came in the search. next, you combine these snippets into one article. Now you spin this article with a spinner software to get an entirely new article. Just make sure you use the manual spinning mode so that your article will make sense.

In case you are not familiar with the concept of "spinning articles" here are some explanations. With this process you utilize a simple software program that takes an original article and alter it using replacement words (synonyms via an automated thesaurus) in order to create entirely new articles without having to re-write them. It's called "spinning" an article. This have many uses in the Internet Marketing field and we will talk about it later when we discuss linking strategies.

The best spinner software on the market today is called... [The Best spinner](#) (If the link doesn't work, copy and paste the following URL into a browser: [www.liraz.com/bestspinner](http://www.liraz.com/bestspinner)). If you wish to be a successful internet marketer you need to familiarize yourself with this concept. They have on their site a nice video explaining its uses. You should take a look.

## **Optimizing Your Site For the Search Engines**

Once you have your pages and content in place it's time to optimize them so that your pages will rank as higher as possible on Google and the other search engines. In this section we'll deal with the "On Page" optimization.

While the "Off-Page" optimization, mainly the external linking structure (that we'll discuss later), is what will give you your unfair advantage - the on-page optimization is a pre-requisite for the off-page to succeed. What I mean to say is that if the on-page optimization is not done right, the best off-line optimization in the world will not help you one bit. so you need to pay attention here.

I'll walk you now step by step in what you need to do:

- 1. Title tag** - this is an HTML tag that goes within the header section of the page. Title tags are the most important on-page factor for SEO. Your keyword should be included within the title tag preferably close to the beginning of it. This is what Google shows on its search results page so you should also make it attractive so that it will entice searchers to click on it. Don't just throw your keyword there, make sure that it is appealing.
- 2. Headline tags (H1, H2, H3)** - make sure your page include one H1 tag with your keyword in it. This headline tag shows Google that the text within it is important to the intended audience.
- 3. Meta Description tag** - while this does not have a bearing on the ranking of the page, Google still pulls the text of how it describes your page to other people from this tag - be sure to make it attractive so that more people will be clicking your page.
- 4. Images** - you should include at list 2 images in each page. Also add one video to one of the pages in your site, you can simply embed a video from YouTube. Make sure one

of the images has your keyword in its ALT tag. All other images need to also have ALT tags but should not include your keyword in them. Too many ALT tags with your keyword can lead to an over optimization penalty by Google.

**4. Keyword density** - the exact keyword density is not important, I'll say it again, the exact percentage of the keyword density is not import. Simply include about 3 instances of your keyword in each page, one of them should be close to the beginning of the article, one of them can be in Bold or Italics and that will do (do not be tempted to overdo it - that's a common newbie mistake).

**5. Synonyms** - you can include 2 or 3 synonyms to your page that does not include exact words from your keyword.

**6. Article Topic** - this is important- your content should be on topic and match the niche and the keyword that is being targeted.

**7. Outbound link** - add one outbound link pointing to an authority site in your topic. This could be a Wikipedia page in a similar topic to yours. Place it at the bottom of the page, you can call it 'recommended source' or something similar. Ah, and do not add a 'no follow' tag to it, leave it in a natural state.

**8. Unique Content** - the page should be unique and not a duplicated one, if you are using a spun article it should be at least 75% unique. it should also be making sense and has decent grammar.

**9. Length of articles** - each page should be between 500 and 1000 words long. Be sure to vary the length of the articles in a site. Don't make all the articles exactly the same size.

Once your site is online and the on-page optimization is set, it's time to start creating links pointing to it. That's the subject of our next chapter.

[Go to Top](#)

## **6. The Fourth Step; Creating an External Linking Structure That Will Blast Your Site to the Top of Google**

Search rankings for a specific keyword are primarily driven by the backlinks to your website using that keyword in the anchor text. But not all backlinks are treated equally. The more powerful a back link is, the more "juice" it flows into your website. And the more "link juice" that flows into your website, the higher your website ranks in search results. So both quantity and quality of back links are important in ranking higher in search results.

Getting external links, the link building phase of the Amazing Formula is the single most critical factor for attaining high rankings and consequently making money online.

Your link building activities are what will make or break your online business. On one hand, when done right, it can blast your pages to the top of Google - on the other hand, even a small mistake can drop your pages into the Google abyss.

Too many links containing the exact same anchor text - Boom, Busted!

Too many links from low quality sites - Boom, Busted!

Too many links coming from just one genre (e.g. only from directories) - Boom, Busted!

Too many links coming from non relevant pages - Boom, Busted!

You get the picture...

That is why I strongly encourage you to acquire every piece of link building knowledge you can lay your hands on. Sorry pal, there is no way around it. if you wish to succeed in internet marketing you must know link building. Even if you are planning to outsource your link building tasks, you should be able to supervise everything that is done for you, and you should ask that they get your approval in advance for all the details of each linking campaign they run for you.

Listen to what happened to me once...

One of my sites had a page that was ranked #6 on the first page of Google's search results for a very competitive term for a couple of years. This page was earning me a nice sum of money day in and day out. One day I decided to try to improve its ranking, I contracted a firm from the Philippines to do a small manual linking campaign for this page. This firm came highly appraised on the forums and the people there were nice and seem knowledgeable. At that time I was busy with a big project and also a bit out of laziness I neglected to ask for a preapproval. To make a long story short, one month and 400 Dollars later my page sank to the fourth page of the Google SERPs.

Now there are two morals to the story:

First, don't count on anyone to do a link building job for you without your approval, in advance, of any small detail of it.

Second, If you have a money producing page ranked anywhere on the first page of Google - don't mess with it!

If you are curious as to what went wrong with this campaign. In the postmortem I discovered that they created too many backlinks with the exact keyword as the link text - and this is something that Google does not like.

Now, the best link building knowledge source that I know of is the [Link Building Course](#) (If the link doesn't work, copy and paste the following URL into a browser: [www.liraz.com/linkbuilding](http://www.liraz.com/linkbuilding)). I strongly encourage you to buy their course. It's a bit pricy but it is well worth the price. Look at it this way, each mistake that is not being avoided due to lack of knowledge can cost you many many times more than the price of this course.

OK, now we are ready to delve into the Amazing Formula's linking strategies.

For our external linking structure we are going to utilize the most effective most powerful linking strategy there is, called "Tiered Linking".

With Tiered Linking you build 3 tiers of links, the links in tier 1 points to your money page, tier 2 points to tier 1 and tier 3 points to tier 2. Basically you are building backlinks to your backlinks. This structure gives your first tier of backlinks more strength and authority. Over time your tier 1 backlinks will gain page rank and that link juice gets passed directly onto your site. It creates a knock on effect passing huge volumes of link juice and authority all the way down the chain to your site. Another advantage of this structure is that it gives search engine spiders thousands of paths and opportunities to land on your site which will further increase rankings.

Here's a diagram that gives you a representation of the Tiered Linking structure:

Now let's start with the process of building links for tier 1, these links point directly to your money site.

The links for tier 1 should be created manually and gradually. This means it should be done by you or outsourced to a firm that does manual linking - no automatic software at this phase. It should be spread gradually over two months, faster than that can trigger Google's penalty algos. You can't speed up stuff like building tier 1 links, or else you're going to get penalized.

If you don't have the time or the inclination to do the manual link building yourself, you can outsource it. This is what I'm doing. Manual link building is a tedious task so I usually hire someone else to do it for me. A good and reliable manual link building service that you can hire is [Rank Crew](#) (If the link doesn't work, copy and paste the following URL into a browser: **www.liraz.com/rankcrew**). I highly recommend them.

While building tier 1 you need to vary the anchor text as much as possible since Google discount too many instances of exact match anchor text. Follow these guidelines for the link text (anchor text) of your back links:

20% Main keyword exact match (e.g.: "main keyword")

20% Variation of main keyword (e.g.: "best main keyword resource")

50% Generic anchor text (e.g.: "click here, here, clicking here, good resource, see this, have a look")

10% URL of the page as the link text (e.g.: "www.mainkeyword.com" or "mainkeyword.com" or "http://www.mainkeyword.com")

Now to the actual link building. I can't teach you here all the aspects of doing basic linking, this is beyond the scope of this guide. You should be able to find plenty of resources for that online, or better off, buy the [Link Building Course](#) (If the link doesn't work, copy and paste the following URL into a browser: **www.liraz.com/linkbuilding**), this is the best resource of linking knowledge that I know of.

I will however give you some basic guidelines, point you to the right directions and provide you with a list of sites that can feature links pointing to your site.

**Important Note:** before you create backlinks with any site, make sure they are not adding the NoFollow tag to their links - do not create tier 1 links with sites that NoFollow their links.

Now here's a list of site's categories where you should build links for your tier 1 (find more sites in the Appendix):

**Web 2.0's** - great for creating mini sites with articles and videos that link back to your main site. You can use spun articles for the content. Here's where [The Best spinner](#) (If the link doesn't work, copy and paste the following URL into a browser: **www.liraz.com/bestspinner**) will come handy. You can use articles that are spun to 50%. Create 10 blogs here and post to them with your link embedded. Make sure the topics are relevant to your keywords, this is important.

Here's a sample of sites in this category (find more in the appendix):

wordpress.com  
blogger.com  
issuu.com  
yola.com  
tumblr.com  
weebly.com  
my.opera.com  
livejournal.com  
typepad.com  
sfgate.com

**Social Bookmarking** - get your site bookmarked! 30 bookmarks will do it.

Here's a sample of sites in this category (find more in the appendix):

connotea.org  
delicious.com  
digg.com  
reddit.com  
slashdot.org  
stumbleupon.com  
citeulike.org  
chime.in  
bibsonomy.org  
blinklist.com

**Directories** - web directories are a great source for links - strive for about 40 quality directory links submissions. Seems tedious? there is an excellent tool that can help you with this task. It will make creating manual links from directories a breath. I strongly recommend that you use it: [DeepLinkerPro](#) (If the link doesn't work, copy and paste the following URL into a browser: **www.liraz.com/deeplinker**) It allows you to use varied anchor text and also to drip feed the submissions over time to make it all look as natural as possible.

Here's a sample of sites in this category (find more in the appendix):

wordpress.org/showcase  
abc-directory.com  
cssdrive.com  
cuedirectory.com  
dirbull.com  
dirnext.com  
Elecdir.com  
elsf.org  
envirolink.org  
freerwebdirectory.com

**Blog Directories** - If you have a blog get it listed on these sites.

Here's a sample of sites in this category (find more in the appendix):

technorati.com  
alltop.com  
blogs.com  
globeofblogs.com  
blogcatalog.com  
topix.net/dir  
blogtopsites.com  
blogtoplist.com  
ontoplist.com  
hotvsnot.com

**Quality Article Directories** - You can use spun articles for submission to these directories. Note that the better directories will review your articles before accepting to their site, so make sure they are grammatically correct and make sense. Submit to 30 directories here.

Here's a sample of sites in this category (find more in the appendix):

TheFreeLibrary.com  
Ezinearticles.com  
GoArticles.com  
SelfGrowth.com  
Gather.com  
ArticlesBase.com  
ArticleDashboard.com  
ArticleSnatch.com  
ArticleCity.com  
Isnare.com

**Video** - create some videos and submit to video sites. You can find at fiverr.com folks that will create a nice video for you for 5 bucks a piece. 3 or 4 video submissions will do for this category.

Here's a sample of sites in this category (find more in the appendix):

youtube.com  
vimeo.com  
dailymotion.com  
metacafe.com  
truveo.com  
videoegg.com  
videobomb.com  
veoh.com  
liveleak.com  
ifilm.com

**RSS Directories** - Create a RSS feed and submit to these sites. Submit to 30 directories here.

Here's a sample of sites in this category (find more in the appendix):

topix.net  
blogdigger.com  
feedage.com  
feedcat.net  
finance-investing.com  
jordomedia.com  
medworm.com  
redtram.com  
rsmountain.com  
swoogle.umbc.edu

**Doc Sharing** - Submit a PDF file or a PowerPoint presentation here.

Here's a sample of sites in this category (find more in the appendix):

issuu.com  
slideshare.net  
scribd.com  
docstoc.com  
thinkfree.com  
keepandshare.com  
memoware.com  
yudu.com  
ziddu.com  
docs.zoho.com

**Press Releases** - a good source for backlinks and news coverage - most of them cost money though.

Here's a sample of sites in this category (find more in the appendix):

businesswire.com  
prlog.org  
betanews.com  
i-newswire.com  
pitchengine.com  
pr-inside.com  
prlog.org  
businessportal24.com  
cgidir.com  
free-press-release.com  
information-online.com

**Blog Guest Posting** - guest blogging is a powerful link building strategy, however, it's a time-consuming pain in the butt! This can boost your rankings but it is not mandatory to the Amazing Formula.

**Link Favors** - ask friends, Acquaintances and family to place links pointing from their sites to yours.

## Creating links for tier 2 and tier 3

Once you have all your tier 1 links set it is time to start building your tier 2 and tier 3 links.

While with tier 1 we were careful to create our links manually in order for them to appear as "naturally" as possible, with tiers 2 and 3 we can let the quality slip a bit and increase the overall quantity of links that we build.

We still want our links to be contextual and relevant, but we can now use auto generated content on a second tier without a problem. We can worry a lot less about the overall authority and page rank of the domains we are building links from as we start to move the focus away from quality and towards quantity.

For tiers 2 and 3 we are going to leave the "manual" path and move to the "automatic" path. We are going to use a tool that will generate all our tiers 2 and 3 automatically. The best tool for this task is [Senuke](#) (If the link doesn't work, copy and paste the following URL into a browser: [www.liraz.com/senuke](http://www.liraz.com/senuke)). This is the tool that most successful Internet marketers use.

Senuke is a very powerful backlinking tool which has been designed to assist with the time consuming task of creating a large number of links. I'm not going to describe here how Senuke works as they have videos on their site that describe it better than me. What I can tell you is that with Senuke you can create tiered link structures. As much as Senuke is powerful it is very easy to operate, creating tiered links is as easy as moving images on a screen - you need to see it to believe, just go to their site and watch the video. Now, what you do with Senuke is create a 2 tiered structure. It looks like a pyramid - one tier points to another tier that points to one of your tier 1 links - you need to build a different structure for each of your tier 1 links. Use their schedule feature to spread it over time.

Some say that it is safe to also use Senuke for creating the tier 1 links. They may be right, however being the cautious guy that I am, I am not yet ready to test this Hypothesis. I would stick with using only manual methods for the tier 1 links and I strongly advise you to do the same..

In addition to Senuke The Amazing Formula calls for the use of yet another powerful tool called [Backlink Booster](#) (If the link doesn't work, copy and paste the following URL into a browser: [www.liraz.com/backlinkbooster](http://www.liraz.com/backlinkbooster)). Backlink Booster automatically increases the power of the backlinks to your website. It's both a backlink indexer aiming to get your backlinks indexed faster, and also a backlink booster to help boost the amount of link juice each of your backlinks sends to your website (use it on your tier 1 backlinks).

Now, if we have Senuke why would we also need Backlink Booster? The fact is that many of the backlinks you are building are never found by Google thus seriously diminishing your linking efforts. What Backlink Booster does is it builds backlinks to your backlinks in a way that all of those backlinks that Google didn't find, are now found by Google. This not just help Google discover all of your backlinks, it also "boost" them so

that now more link juice gets passed to your site thus the authority they all possess is multiplied, which flows through to your website! So the end result is more, stronger backlinks!

My tests show that operating Backlink Booster in addition to Senuke creates a strong synergetic effect that translates in a much better Google rankings. It's the one-two punch that will get you that elusive Unfair Advantage. Anyway, in order to rip the full power of the Amazing Formula you need to activate both Senuke and Backlink Booster.

This concludes The blueprint of my simple strategy for making money online. Once you completed to create tire 2 and 3 links with Senuke and have Backlink Booster do its thing, all you have to do is sit back and watch your site climb the search engines rankings and the money that is pouring into your bank account.

Here's To Your Success

Meir Liraz

## **Appendix 1: The 50 Best Paying Affiliate Marketing Markets**

The following are the best paying affiliate marketing markets:

- Acne
- Aging
- Allergies
- Anxiety
- Arthritis
- Asthma
- Auto Insurance
- Back Pain
- Beauty
- Cancer
- Cats
- Cosmetic Surgery
- Credit Cards
- Credit Repair
- Debt Consolidation
- Depression
- Diabetes
- Dogs
- Email Marketing
- Employment
- Fitness
- Forex
- Hair Care
- Hair Loss
- Health Insurance
- Home Improvement
- Home Mortgages
- Home Owner's Insurance
- Home Security
- Homeschooling
- Insomnia
- Internet Marketing
- Life Insurance
- Muscle Building
- Network Marketing
- Nutrition
- Online casinos
- Online Poker
- Parenting
- Payday Loans
- Personal Bankruptcy
- Personal Development
- Personal Finance

Pregnancy  
Quit Smoking  
Real Estate  
Skin Care  
Snoring  
Stock Market  
Stress  
Teeth Whitening  
Travel  
Web Hosting  
Weddings  
Weight Loss

## Appendix 2: Sources for Backlinks Sorted by Category and Page Rank

This list include the following categories:

- \* Web 2.0's
- \* Bookmarks
- \* Directories
- \* Blog Directories
- \* Quality Article Directories
- \* Video
- \* RSS
- \* Doc Sharing
- \* Press Releases

**Important Note:** before you create backlinks with any of the sites on the following list make sure they are not adding the NoFollow tag to their links - do not create tier 1 links with sites that NoFollow their links.
